1 Scaling of Beowulf-class distributed systems

John Salmon, Christopher Stein, Thomas Sterling

November 1998 **Proceedings of the 1998 ACM/IEEE conference on Supercomputing (CDROM) Supercomputing '98**

Publisher: IEEE Computer Society

Full text available: html(45.38 KB) Additional Information: full citation, abstract, references, citings

Beowulf-class systems employ inexpensive commodity processors, open source operating systems and communication libraries and commodity networking hardware to deliver supercomputer performance at the lowest possible price. Small to medium sized Beowulf systems are installed or planned at dozens of universities, laboratories and industrial sites around the world. The design space for larger systems, however, is largely unexplored.We investigate two interconnection techniques that would allow the s ...

2 Session 5: less is more: NATE: Network Analysis of Anomalous Traffic Events, a low-cost approach

Carol Taylor, Jim Alves-Foss

September 2001 **Proceedings of the 2001 workshop on New security paradigms NSPW '01**

Publisher: ACM Press

Full text available: pdf(709.08 KB) Additional Information: full citation, abstract, references, citings, index terms

A new approach to network intrusion detection is needed to solve the monitoring problems of high volume network data and the time constraints for Intrusion Detection System (IDS) management. Most current network IDS's have not been specifically designed for high speed traffic or low maintenance. We propose a solution to these problems which we call NATE, Network Analysis of Anomalous Traffic Events. Our approach features minimal network traffic measurement, an anomaly-based detection method, and ...

3 IPSN/SPOTS posters: A compact, high-speed, wearable sensor network for biomotion capture and interactive media

Ryan Aylward, Joseph A. Paradiso

April 2007 **Proceedings of the 6th international conference on Information processing in sensor networks IPSN '07**

Publisher: ACM Press

Full text available: pdf(923.99 KB) Additional Information: full citation, abstract, references, index terms

In this paper, we present a wireless sensor platform designed for processing multipoint human motion with low latency and high resolution. One application considered here is interactive dance, in which a choreographer wishes to translate the movements of multiple dancers into real-time audio or video content to accompany the performance.

This can only be accomplished using a distributed measurement system capable of responding quickly with enough information to describe the expressive movemen ...

Keywords: biomechanics, biomotion, dance, high-performance, inertial measurement unit, interactive media, real-time, synchronous motion analysis, wearable sensors, wireless

Results 1 - 3 of 3

Nothing Found

Your search for **+abstract:low +abstract:bandwith +abstract:test +abstract:system +abstract:internet** did not return any results.

You may want to try an Advanced Search for additional options.

Please review the Quick Tips below or for more information see the Search Tips.

Quick Tips

- Enter your search terms in lower case with a space between the terms.

```
sales offices
```

  You can also enter a full question or concept in plain language.

```
Where are the sales offices?
```

- Capitalize proper nouns to search for specific people, places, or products.

```
John Colter, Netscape Navigator
```

- Enclose a phrase in double quotes to search for that exact phrase.

```
"museum of natural history" "museum of modern art"
```

- Narrow your searches by using a + if a search term must appear on a page.

```
museum +art
```

- Exclude pages by using a - if a search term must not appear on a page.

```
museum -Paris
```

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

```
museum +"natural history" dinosaur -Chicago
```
